

Environmental Policy

At Arkad SpA QHSSE is at the heart of what we do and we aim to have all stakeholders at all levels embrace sound QHSSE practices in every activity, project and location.

At Arkad SpA we believe that Excellence in QHSSE leads to safeguarding people and the environment that directly reflects positively on the reputation of the business and on increasing customers trust and bring more business.

We in Arkad SpA strive to fulfill our responsibilities and obligations towards our people, our customers, our partners, our suppliers, our communities and our shareholders by committing to the following values.

Leadership and accountability

- Undertake a leadership role in environmental protection and ensure suitable resources and authority to achieve the required compliance obligations.
- Promote environmental responsibility along the value chain, encouraging suppliers, partners and contractors to adopt international standards and to operate in compliance with defined environmental requirements.

Risk and incident prevention

- Be proactive, integrating the principle of a hierarchy of control in all the project phases and promoting continuous improvement to protect the environment and prevent pollution by using the best available technologies.
- Prevent environmental incidents by identifying potential risks and putting in place actions to mitigate their effects in order to constantly improve the environmental performances.
- Assess potential environmental risks and be trained to plan in advance how to properly manage potential emergencies.

Competence and training

- Be aware of the existing environmental issues, carrying out the necessary training and being adequately informed to effectively undertake our own responsibilities.
- Ensure proper information, instruction and training to personnel about the environmental protection principles, at all levels.

Reporting management and control

- Define environmental monitoring procedures for activities carried out and ensuring an appropriate reporting process.

Management of change

- In a constantly changing working environment, environmental aspects shall be properly considered during the management of change process in order to promote a continuous improvement culture.
