

Health, Safety and Security Policy

At Arkad SpA QHSSE is at the heart of what we do and we aim to have all stakeholders at all levels embrace sound QHSSE practices in every activity, project and location.

At Arkad SpA we believe that Excellence in QHSSE leads to safeguarding people and the environment that directly reflects positively on the reputation of the business and on increasing customers trust and bring more business.

We in Arkad SpA strive to fulfill our responsibilities and obligations towards our people, our customers, our partners, our suppliers, our communities and our shareholders by committing to the following values.

Leadership and accountability

- Undertake a leadership role in health, safety and security matters and ensure suitable resources and authority to achieve the required compliance obligations.
- Promote health, safety and security responsibility and awareness along the value chain, encouraging suppliers, partners and contractors to adopt international standards and to operate in compliance with defined health and safety requirements, as well as adequate security procedures.

Risk and incident prevention

- Be proactive, integrating the principle of a hierarchy of control in all the project phases and promoting continuous improvement in health, safety and security management.
- Prevent incidents and occupational illnesses by identifying potential risks and putting in place actions to mitigate their effects, in order to constantly improve performances.
- Assess all health, safety and security risks and be aware on how to properly handle potential emergencies.

Competence and training

- Be aware of the existing health, safety and security issues, by carrying out the necessary training and being adequately informed to effectively undertake our responsibilities.
- Ensure proper information, instruction and training to personnel about health, safety and security principles, at all levels

Reporting management and control

- Define health, safety and security monitoring procedures for activities carried out and ensure an appropriate reporting process.

Management of change

- In a constantly changing working environment, health, safety and security aspects shall be properly considered during the management of change process in order to promote a continuous improvement culture.
