

CLIMATE CHANGE GUIDELINES

1. Introduction

These guidelines outline Arkad SpA's approach to addressing climate change within our oil and gas projects. Our goal is to integrate sustainability into all operations, reduce carbon emissions, and build resilient infrastructure while adhering to regulations and industry best practices.

2. Climate Change Mitigation

- **Emissions Reduction:** We will assess and minimize our carbon footprint by using energy-efficient practices, renewable energy, and low-carbon materials in project design and execution.
- **Energy Efficiency:** Adopt energy-saving technologies and optimize resource use to reduce waste and improve project efficiency.
- **Innovative Technologies:** Invest in sustainable technologies, including carbon capture and renewable energy solutions.

3. Climate Change Adaptation

- **Climate Risk Assessment:** All projects will undergo climate risk assessments to identify potential impacts from extreme weather and changing conditions.
- **Resilient Infrastructure:** Projects will be designed to withstand climate-related risks such as storms, flooding, and temperature changes.

4. Compliance and Reporting

- **Regulatory Compliance:** Adhere to local and international environmental laws and industry standards related to climate change and emissions.
- **Transparency:** Publish annual reports on sustainability initiatives.

5. Training and Awareness

- **Employee Training:** Provide training on climate change and sustainability practices to all employees.
- **Client Collaboration:** Work with clients to identify and implement sustainable solutions that reduce their environmental impact.

6. Continuous Improvement

- **Monitoring and KPIs:** Track progress on sustainability goals through established KPIs and adjust strategies as needed.
- **Adaptation:** Regularly review and update these guidelines based on new research, technologies, and regulatory changes.

7. Conclusion

By following these guidelines, Arkad SpA will minimize its environmental impact, contribute to climate change mitigation, and ensure the sustainability of our projects and operations in the oil and gas sector.
