

SUSTAINABILITY POLICY

Arkad SpA is committed to integrating sustainability into its business practices, ensuring that resource efficiency and regulatory compliance are at the core of our operations. As an EPC contractor in the Oil & Gas sector, we recognize our responsibility to minimize environmental impact, optimize resource use, and contribute to a more sustainable future.

✓ **Energy Efficiency and Carbon Footprint Reduction**

We strive to optimize energy consumption and lower our carbon footprint through energy-efficient technologies and operational improvements. Our approach includes enhancing energy-efficient design in all engineering and construction phases, prioritizing high-efficiency equipment, and promoting energy-saving construction practices. We also focus on optimizing fuel efficiency, transitioning to low-carbon energy sources, and establishing greenhouse gas emissions monitoring with reduction targets aligned with global sustainability commitments. Additionally, we encourage a low-emission culture by training employees on energy conservation and emissions reduction practices.

✓ **Water Resource Management**

We are dedicated to responsible water management by reducing consumption, increasing recycling, and preventing contamination. Our efforts include integrating water-efficient technologies into design and operations, maximizing water reuse and recycling, and exploring rainwater harvesting strategies where applicable. We also ensure strict compliance with water quality regulations and develop preventive measures to avoid water pollution and contamination.

✓ **Waste Management and Circular Economy**

We work to minimize waste generation and embrace circular economy principles by maximizing resource efficiency and recycling opportunities. To achieve this, we implement waste reduction strategies by optimizing material use, promote reuse and recycling programs for construction and operational waste, and ensure the responsible disposal of hazardous materials. Additionally, we support the use of sustainable materials and collaborate with suppliers and stakeholders to integrate circular economy principles into the supply chain.

✓ **Biodiversity and Ecosystem Protection**

We are committed to protecting biodiversity and minimizing disruptions to ecosystems in project areas. Our initiatives may include conducting environmental impact assessments (EIA) before initiating projects, developing and enforcing biodiversity action plans, and avoiding operations in protected or sensitive ecosystems.

✓ **Compliance and Continuous Improvement**

We uphold compliance with environmental regulations and continuously enhance sustainability performance through innovation and accountability. Our commitments include adhering to ISO 14001 (Environmental Management) standard and providing ongoing training programs for employees. We also engage with clients, suppliers, and stakeholders to drive sustainable project execution and implement a transparent sustainability reporting framework to track progress and promote accountability.

Through this Sustainability Policy, Arkad SpA reaffirms its dedication to responsible environmental practices, reducing its ecological footprint, and aligning operations with global sustainability goals. By embedding these principles into our business strategy, we strive to contribute to a more sustainable future while maintaining operational excellence in the Oil & Gas sector.
